

# CoverSkin<sup>®</sup>

**Provides skin protection for up to 6 hours!**

**CoverSkin skin protection protects the skin from side effects at contact with water-soluble and non-water-soluble cooling lubricants, hydraulic oils, dielectrics, glues and all kinds of plastics.**

## Application:

Apply the spray on your dry and grease free hands. Do not use more than the size of a walnut of our CoverSkin and rub the cream until it is completely absorbed. CoverSkin finds its way into the top layer of the skin. It then forms a level of protection that lasts for at least 6 hours regardless of the changing working materials.

A change of your skin protection is not necessary with chained operating processes of oil and water-soluble products.

**CoverSkin** protects against contact allergies which are caused by dust and removed particles.

**CoverSkin** is non-hazardous to eyes, mucosas and food.

Additional application recommendations:

### Dielectrics

Rub your hands and especially pay attention to your nailbeds and the area under of your finger nails. By using **CoverSkin** you can prevent inflammations caused by removed particles.

### Cooling etc.

**CoverSkin** prevents skin itches and aczemas which are caused by dusts and chips. On dry wounds **CoverSkin** prevents wound infections as good as possible.

### Duroplasts, hardeners, glues, solvents

By using **CoverSkin** soiling can be easily removed. Random or unavoidable contact with these substances and solvents remain without consequences.

### Skin care

Applying **CoverSkin** after work could make additional special skin care not necessary.
